FENC® TOPGREEN® ECO Friendly

Recycled Filament / Recycled CD Filament / Recycled Stretch Filament

Recycled PET Filament 聚酯回收纖維

產品簡介 以回收寶特瓶為原料，經過粉碎、清洗、分解、聚合、造粒、加熱熔融、抽絲及假撚加工製成的纖維，是對地球生態絕對環保之素材。

TOPGREEN® recycled filament is an outstanding environment-friendly fiber based on the material of recycled post-consumer PET bottles, which were processed through grinding, washing, melting, re-polymerizing, spinning, and texturizing to yarn.

產品特色

- 使用最環保技術所生產的再生纖維
Utilizes the most state-of-the-art recycling
- 減輕環境負擔，善盡地球公民責任
Repurposes waste, reduces our reliance on petrochemicals and prevents environmental pollution
- 可追溯性
FENC® Recycling is completely traceable from post consumer to yarn

認證

GREEN RIVER®, Recycled Fancy Yarn

The Most Eco-Friendly Material for Knitwear & Textile

GREEN RIVER®

- GREEN RIVER® is an eco-friendly knitwear material which is made from post-consumer recycled PET bottles with GRS certificate.
- Due to the special yarn structure, the hand feel of the garment with GREEN RIVER® is warm and soft.
- GREEN RIVER® yarn is suitable for most knitwear and textile.

智慧衣塑藝術-用愛鋪路

THE WISDOM OF DA.AI ECO-WOOD PATHS THE ROAD OF LOVE

為解決全球廢棄紡織品的處理問題，大愛感恩科技以循環利用代替焚燒，經過特殊的改質程序研發製成「大愛環保衣塑木」（發明專利號：I647092）。其耐高溫、耐腐蝕性良好、物理性質穩定等特性，可應用於室內外建築材料如步道、涼亭、拱橋、地板材、梁柱、桌椅、手機架、杯墊等貼近日常生活。大愛環保衣塑木更是榮獲德國綠色產品獎、法國Concour Lepine國際發明獎、馬來西亞MTE國際發明獎與大賞特別獎等多國肯定，延續物命，更為創造「零廢」的循環經濟而努力。

Fast fashion continues to burden the world with textile waste. To deal with this environmental problem, DA.AI Technology chooses circular method over burning, research and develop recycled clothing into DA.AI Eco-Wood (Patent No. I647092), and awarded by Concours L é pine International Paris, Malaysia Technology Exhibition, and Green Product Award. DA.AI Eco-Wood can be used for outdoor constructions, such as: wood flooring, arch bridge, park chair, and more, not only extends material life, but also creates a "zero waste" circular economy.

THE NEW STANDARD IN SUSTAINABILITY.

A HISTORY OF CARE. AN AMBITIOUS FUTURE.
STANDARDS • VERIFICATION • DATA

TARGETING 2025, DOING MORE WITH LESS

* No net soil loss. The remaining soil loss is balanced with new soil creation.

** water, greenhouse gases, energy and land use per pound of fiber; soil carbon and soil loss is per acre.

INDEPENDENT 3RD-PARTY VERIFICATION.

The new U.S. Cotton Trust Protocol is a tangible and transparent snapshot of U.S. cotton growing practices and the gains in sustainability standards resulting from them.

- It's an integrated data collection, measurement and verification system that will document U.S. cotton production practices and their environmental impact.
- Growers will enroll individually with a list of more than 100 questions to be used by verifiers to measure improvement and required to use a data tool (like the FieldPrint Platform) to allow for quantitative measurement of key sustainability metrics.
- There are two levels of verification: 2nd party verification to ensure the questionnaire and other required documentation is completed; 3rd party verification by a completely independent sustainability expert.

The details of the U.S. Cotton Trust Protocol are being fine-tuned and a pilot program will be launched in 2019 and fully implemented in 2020.

FORMOSA CHEMICAL & FIBRE CORPORATION YOUR BEST CHOICE FOR ENVIRONMENT-FRIENDLY NYLON FILAMENT.

From the finest 4 denier to the coarsest 2500 denier, a complete product line, from polymerization pilot trial to mass production, dedication to product differentiation.

1. Recycled Nylon Filament

From waste yarn, recycling into CPL raw materials, re-polymerization, to spinning into nylon filament.

2. Dope Dyed Nylon Filament

Energy saving, water saving, Solution dyed nylon color yarns.

3. Function nylon Filament

From polymerization, chip, to spinning continuous production. Cool, hot, moisturizing, dry and comfortable multi-functional material.

4. N/C One Process Dyed Nylon Filament

The nylon/cotton one process dyed nylon filament is a new image for our nylon yarns.

編者的話

臺灣環保紡織品結合流行與機能

致力開創美好未來生活

臺灣紡織業歷經60餘年的發展，循序漸進地整合供應鏈體系有成，進而建立生態保護、節省能源與資源的價值創新商業模式，並且以生產對環境友善之機能性紡織品在全球市場領先群倫。為協助國際專業買家瞭解臺灣紡織業者長期致力於環保領域的發展成效與競爭優勢，媒合買賣雙方找到優質合作夥伴，紡拓會特別出版「臺灣環保紡織品精選專刊」並建置網站，彙集臺灣環保紡織品發展現況及供應商資訊。

臺灣紡織產業不斷地研發與創新，每年每季都有創新的環保紡織品，將生活美學、高科技、環保與創新機能完美結合，賦予紡織品新的定義。鑒於全球紡織產業對於環保紡織品並無明確定義，本會率先依照環保紡織品的精神、功能、技術、服務概分為六大環保產品與服務領域：環境友善紡織品、節能減碳紡織品、無毒或天然有機紡織品、循環再生紡織品、綠色製程紡織品、環保檢測服務。盼望能兼顧環保永續與社會安全責任，善用物質特性，化腐朽為神奇。

臺灣紡織業以驚人的豐沛創新能力，創造生活上的無限可能，致力開創未來美好生活。

今日環保紡織品在消費市場已成為一股不可抗拒的綠色浪潮，採用環保紡織品已成為全球通路暨品牌商履行企業社會責任的具體表現。紡拓會多年來致力於推廣環保紡織品，希望藉由產業轉型來使臺灣環保紡織品成為繼機能性紡織品後，另一個領先各國紡織產業的發展主流。

Editor's Notes

Taiwan Eco-Textiles: a Marriage of Fashion plus Function

Green innovation makes our life better!

Sustainable products are an integral part of the green consumerism as well as a key element to become a successful business in today's very competitive global textile market. International brands, retailers and manufacturers are taking long-term plans and actions to source and produce textiles that have the least impact on the environment and are made in a socially responsible manner. The Taiwan Textile Federation(TTF) has been working in promoting Taiwan's eco textiles for some time in order to establish the island's leading position in the eco textile market after the successful precedent in the area of functional textiles.

After more than 60 years of development, Taiwan's textile industry has evolved from a mass production textile supplier to a textile innovator equipped with a comprehensive yet integrated value chain. While traditional textiles still have an important share in Taiwan's textile output, the extraordinary performance achieved by local enterprises in the field of eco and multifunctional textiles has redefined Taiwan's status in the global textile marketplace.

The core competencies of Taiwan's textile industry lie in its R&D, technology and innovation. The industry is constantly introducing its new eco textile developments which combine high-tech, ecology, function and life aesthetics to give new definition to modern textiles.

The annual publication of Taiwan Eco Textiles serves is a compilation of the industry's achievement in eco textiles for the past year. It serves as a valuable tool for those who are looking for reliable and determined textile business partners. More information on eco textiles in Taiwan can be found at eco.textiles.org.tw

We truly believe that the abundant innovation of Taiwan's textile industry can contribute to our environment and ameliorate our daily life!

Taiwan: The Best Sourcing Center for Functional + Eco Textiles

Further to functionality, eco friendliness is now a textile DNA for Taiwan's textile industry. Whether it's material, manufacture process, technology, product or environment, our green-minded industrialists are working hard to make Taiwan the best source for eco and functional textiles.

Eco-friendly Textiles

Textiles using materials made from recycled waste such as post consumer plastic bottles and ocean waste and recycled biomass such as wood, leaves and food waste. Also including biodegradable textiles which impose no burden to the environment.

Energy-saving and Carbon-reducing Textiles

Textiles appealing to the reduction of water/carbon footprint and energy consumption, e.g., textiles with functions like thermal, cooling and blood circulation enhancing.

Organic / Non-toxic Textiles

Textiles containing no environmental hormones; toxic-free and heavy metal free textiles; organic textiles; medical textiles.

Circular Textiles

Textiles using recycled post consumer textiles as materials and produced by way of reengineering, redesigning or redefining in order to drive resource efficiency, cut waste and prevent environmental pollution.

Green Processing

Textiles made by adopting a green process such as waterless dyeing, solution dyeing, normal pressure dyeing, etc.; or made via a production process with stricter than regular waste emission standards; or made in green/eco-labelled factories.

Textile Testing and Certification Services

Companies/organizations offering services in eco-labelling and certification, environmental testing, standards setting, etc.

臺灣—最佳環保與機能性紡織品採購中心

臺灣具備環保紡織品的高度發展潛力，業者落實環保從根本做起，不僅重視產品源頭符合綠色設計、導入環保製程，並將環保思維納入企業文化，為企業注入綠色 DNA，堅持創新開發環保與機能兼具的多元紡織品。

環境友善紡織品

產品原料來自回收廢棄物材料(如寶特瓶、海洋廢棄物等)、生質環保材料(如木料、樹葉、廚餘等)，或產品強調可自然分解、不造成環境負擔。

節能減碳紡織品

產品訴求使用時能夠減少水或碳足跡、能源損耗，如：發熱、保暖、涼感、促進血液循環等。

無毒或天然有機紡織品

產品訴求不含毒性、重金屬、環境賀爾蒙，或產品本身為有機紡品、素材，或為醫療健康用紡織品。

循環再生紡織品

特別針對回收消費後的紡織製品，以重新製造、重新設計、重新定義(Reengineering/Redesign/Redefine)等方式再生產利用之紡織品，促進更好的資源使用效率、消滅廢棄物、延長紡織品使用壽命及避免汙染自然環境。

綠色製程紡織品

產品採用無水染色、原液染色、常壓染色等綠色製程，或製程中汙染排放採用比常規更嚴格的標準、使用綠色節能工廠等。

環保檢測服務

企業從事或提供標章驗證、環境檢測、標準制定相關等服務。

Recycled PET Bottle Textiles – Reclaim, Manufacture, and Sell!

寶特瓶回收再生紡織品— 回收、生產、銷售系統最完整

The journey where drinking water bottles turn into a beautiful dress starts from the recycle bin around the corner of your neighborhood. Once the bottles are collected and then crushed, they will be made into staple fibers for spinning or into filament yarns for weaving, and then are ready for end-product applications. The production of recycled PET bottle textiles in Taiwan benefits from a thorough reclamation scheme. Consumers are encouraged to recollect used bottles. About 90,000 tons of PET bottles are reclaimed every year in Taiwan, equivalent to 4.5 billion drinking water bottles (bottle volume: 600 ml). per year.

The production and application of recycled PET bottle polyester fibers are optimized with the upstream spinning technologies for functionality, micronization and compound effects, and the downstream finishing technologies of weaving, dyeing, coating and lamination. Taiwan's position as the most reliable source for functional and ecological textiles was further proved at various international sports events such as the 2018 FIFA World Cup Russia where many teams wore jerseys made from recycled PET bottle textiles developed by Taiwanese textile companies.

Recycled Nylon Textiles – Reserve & Recover Resources!

尼龍回收再生紡織品—資源再利用

Threads and shreds from a textile factory are more valuable than you think. Through a process of sorting, screening, crushing, extruding, chipping and spinning, these wastes can be transformed into clothing, home and industrial textiles.

Taiwan-made nylon textiles are renowned for their “value for money” quality, an advantage now extended to recycled nylon textiles. With their advanced development in recycled nylon production technology, Formosa Chemicals & Fibre, Honmyue, and Toungh Loong substantially help reserve and recover resources for the planet.

Cellulosic Fibers – from Nature, Back to Nature

纖維素纖維—來自大自然的環保原料

Plant fibers such as cotton, linen, bamboo and pineapple leaves, seaweed and fibers such as rayon, Modal and Tencel, of which the materials are derived from plant fibers, are biodegradable cellulosic fibers. They do not generate any negative impact on environment when burned and are thus classified as typical eco fibers.

In the category of cellulosic textiles, Formosa Chemicals & Fibre, Formosa Taffeta, Acelon and Fabrix Plus have successfully developed various high-end fibers, yarns and fabrics using local eco materials.

Solution Dyed Polyester Yarn – a Best Choice for Water Saving Textiles

原液染色聚酯纖維—節水減碳的最佳選擇

Among the whole production process of textile industry, the dyeing sector usually plays an important role in creating special effect for and adding value to products, but is also recognized as the most environmentally unfriendly part due to the huge consumption of water and chemicals. The production process of solution dyed polyester yarn is in line with the concept of “design for environment”. There is no need to go through any dyeing process once the weaving is done, which can therefore cut down water and energy consumption as well as effluents and waste gas generation by 70~82%.

Green Theme International is a company with a mission. They invent, commercialize and sell water free textile technology to create the best performing fabrics and to eliminate water pollution. their first product provides the most effective rain protection on the market without using or polluting any water.

Solution Dyed Nylon Yarn – Performance for Consumers, Protection for Earth

原液染色尼龍纖維—兼具環保與機能性的材料選擇

The development of nylon textiles has reached full bloom in Taiwan. The production of nylon filament yarn, textured yarn and finished fabrics can fully satisfy the demand of local down-stream manufacturers.

Nylon textiles have a soft and natural hand feel. They are light-weight with high tenacity. Taiwan's development in nylon textiles ranges from CD-Nylon 6, high-shrinkage nylon 6, multi-functional nylon textiles (antibacterial, UV proof, deodorant and moisture-transferring), microporous nylon fabrics with cross section, functional nano-nylon fiber/textiles, anti-electrostatic lubricant for nylon production, to nylon non-woven fabrics.

LeaLea/Li Peng offers branded solution dyed nylon fiber Ecoya[®]; Formosa Chemicals & Fibre provides solution dyed nylon filament and solution dyed rayon fiber; and Formosa Taffeta, Toung Loong and Acelon are the suppliers of solution dyed nylon fabrics.

Ecological Polypropylene Fiber

聚丙烯纖維—符合生態環保訴求

Polypropylene(PP) fiber is a polymer made up of carbon and hydrogen molecules. It is biodegradable with very low environmental impact, and meets the standards on environmental safety and hazardous content.

Traditionally the fiber is colored by way of solution dyeing, which is environmentally friendly in terms of saving energy and reducing carbon dioxide emission.

Honmyue has introduced a new-generation dyeing method by using disperse dyes on PP textiles. The PP fiber not only can be dyed in relatively low temperature but also allows end products to keep multiple functions.

Normal Pressure Dyeable Polyester Fiber – Environment Matters!

常壓染色紡織品—節能減碳高手

The molecules of a polyester polymer are strongly bound together. It requires high temperature and pressure to saturate the fibers with dye solutions. The great thing about normal pressure dyeable polyester fiber is that during the coloration, the dyeing temperature can be brought down to 95~100°C without compromising color quality.

While the lowered dyeing temperature saves our environment from heavy use of heating energy, manufacturers at the same time can benefit from the saving on cooling time and dyeing cost. Major suppliers of this eco fiber in Taiwan include Nan Ya Plastics, Honmyue, Far Eastern New Century and Formosa Taffeta.

Solvent Spun Fiber – the Most Eco-minded Manmade Fiber

溶劑可回收纖維—符合生態平衡原則

The main ingredient of solvent spun fiber is cellulose, which is derived from woods. Up to 99.5% of solvents used during the fiber manufacturing process are recoverable and reusable, and the finished products are naturally biodegradable. What's more, less water and energy are used in the manufacture. All these environmentally sustainable characteristics win this kind of fiber a name as the most eco-minded manmade fiber in the last 50 years. Formosa Taffeta is a major supplier of eco textiles made of this kind of fiber in Taiwan.

Biodegradable Textiles – Sustainable Textiles for the Earth

可分解紡織品—地球永續發展

Biodegradable materials open a new window for the textile industry with environmental and business sustainability in mind. Biodegradable materials cause almost zero environmental impact even before and after their product lifecycle, making them a perfect example of green textiles.

APEXA[®] is a biodegradable polyester from DuPont. Formosa Taffeta and Nan Ya Plastics are using this material to make eco-friendly textiles.

Heavy Metal Free Polyester Fiber – Safety Guarantee

無重金屬聚酯纖維—安全有保障

In the process of producing polyester, catalysts are often added to reduce the time required for polymerization in order to significantly increase the efficiency. The most common catalyst is a heavy metal called antimony (Sb). The European Union has stipulated in its legislation that only fabrics with an antimony content less than 30ppm are qualified for eco labels.

Heavy metal free polyester fiber shares similar properties to regular polyester fiber; moreover, it does not have the unfavorable yellowish problem which regular polyester fiber using Sb-free catalysts usually has. It can be applied to various textile products and PET bottles, and can also be recycled and reprocessed.

In Taiwan, major providers of heavy metal free polyester textiles include Nan Ya Plastics for filament yarn, Four Elements for spun yarn, Formosa Taffeta and Far Eastern New Century for fabrics, and Atics for zippers.

Bio-based Textiles (Bio-PET and Sorona[®]) – Reducing Petrol Consumption and CO₂ Emission

生質環保紡織產品—有效減少石油資源消耗與二氧化碳排放

Though still a petroleum-based material, about 30% of bio textile's composition is plant-based, effectively helping reduce the consumption of fossil energy resources. The most commonly-known bio textiles are Bio-PET and Sorona[®]. Bio-PET is an innovative fiber from Nan Ya Plastics. Different from the traditional PET fiber production, the material EG used to make Bio-PET fiber is from natural renewable resources, successfully reducing the dependence on petrol and effectively lowering 25% of carbon emissions.

Sorona[®] is a breakthrough made by DuPont in renewably sourced materials for textiles. With 37% of its basic raw material drawn from natural sugar, the production process of Sorona[®] reduces 30% of energy consumption and 63% of CO₂ emission compared with that of nylon chips, making it an ideal choice for eco textiles.

Nan Ya Plastics, Tounge Loong, Far Eastern New Century and Formosa Chemicals & Fibre, among others, are the leading producers of bio-based textiles in Taiwan.

Instant Cooling Fiber – Feel Cool in the Summer

散熱涼爽性纖維—夏天涼爽

The performance of instant cooling textiles comes from the mineral compound powders which possess the properties of slow heating and quick cooling. The fibers with mineral powders added help wearers drive out body heat and have a comfy chilling feel.

When wearers are in instant cooling clothing, A/C temperature setting can be raised by 2°C, which helps save energy and cut carbon footprint.

Toung Loong, Da.Ai, Formosa Chemicals & Fibre, Formosa Taffeta, Four Elements, Nan Ya Plastics and GAC are all innovators in this sector.

Organic Textiles – It's Green, It's In!

有機紡織品—符合綠色潮流

Organic cotton refers to the cotton cultivated on fields over 3 years free from any use of pesticides and chemical fertilizers. No insecticides, herbicides and defoliators are allowed in the growth of organic cotton. It is one of the best material options for responsible brands and enterprises to realize their commitment to protect our planet.

The organic cotton yarns made by Formosa Chemicals & Fibre, Formosa Taffeta and Far Eastern New Century have passed certification from international professional bodies such as IMO of Switzerland and Control Union of the Netherlands.

Cotton and Wool – Natural and Sustainable

棉花與羊毛—天然和永續

Cotton and Wool are natural, renewable and biodegradable. Cotton has been used to dress and protect mankind for at least 7,000 years. Today cotton textile is a global industry. After 30 years of efforts and thanks to the new agritechology, American cotton farmers are now able to increase water-use efficiency by 80% and decrease energy consumption and pesticides use by 31% and 50% respectively.

To ensure people can continue to reap cotton's natural benefits now and in the future, U.S. cotton industry is committed to producing cotton in the most sustainable manner possible, taking into account the economy, environment and social responsibility.

80% of the global merino wool used in apparel is produced in Australia, where the production for the year 2017/18 reached 338,000 tons. The properties of Australian Merino wool plus its eco friendliness make it a most suitable apparel material for eco-conscious consumers. And the Merino Wool system introduced by The Woolmark Company further provides a series of functional fabric collections for sports activewear.

Charcoal Fiber – Keep Warm in the Winter

炭類纖維—冬天保暖

Once through fire and flame, bamboos and coconut shells are transformed into porous charcoals. The charcoals are further grounded into nano-sized powders, mixed well with polymers and then undergo a series of fabrication process—from spinning, false twisting to weaving—before ready to be made into a variety of textile products. Formosa Chemicals & Fibre, LeaLea/Li Peng, Nan Ya Plastics and Acelon are Taiwan's major manufacturers of charcoal fiber. Nan Ya Plastics transforms coffee grounds via carbonization process into coffee fibers for a wide range of applications. Formosa Taffeta has launched collections of bamboo charcoal and coconut shell charcoal fabrics. Atics uses bamboo charcoal fiber to make zippers and accessories.

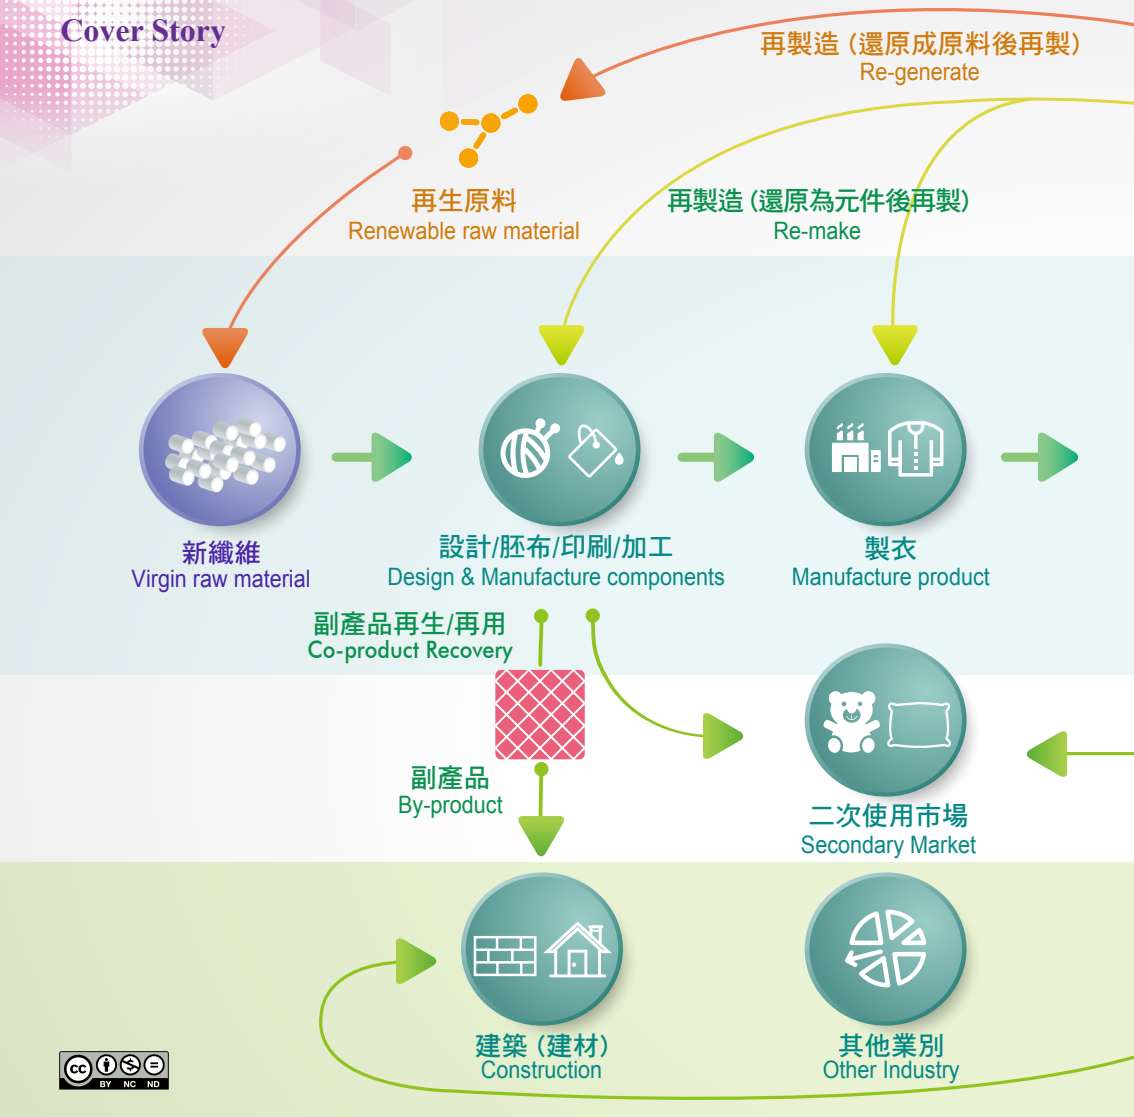

Get Certified – a Ticket to the Global Market

驗證標章—進入市場的必要工具

Textile industry around the world has a reorientation of thinking about the environment. When ecology finally does not have to come behind economy, many textile enterprises have their green policy and green actions reinforced as a marketing force for elevating corporate/brand image and increasing sales performance as they cope with the inconvenient truth of global warming.

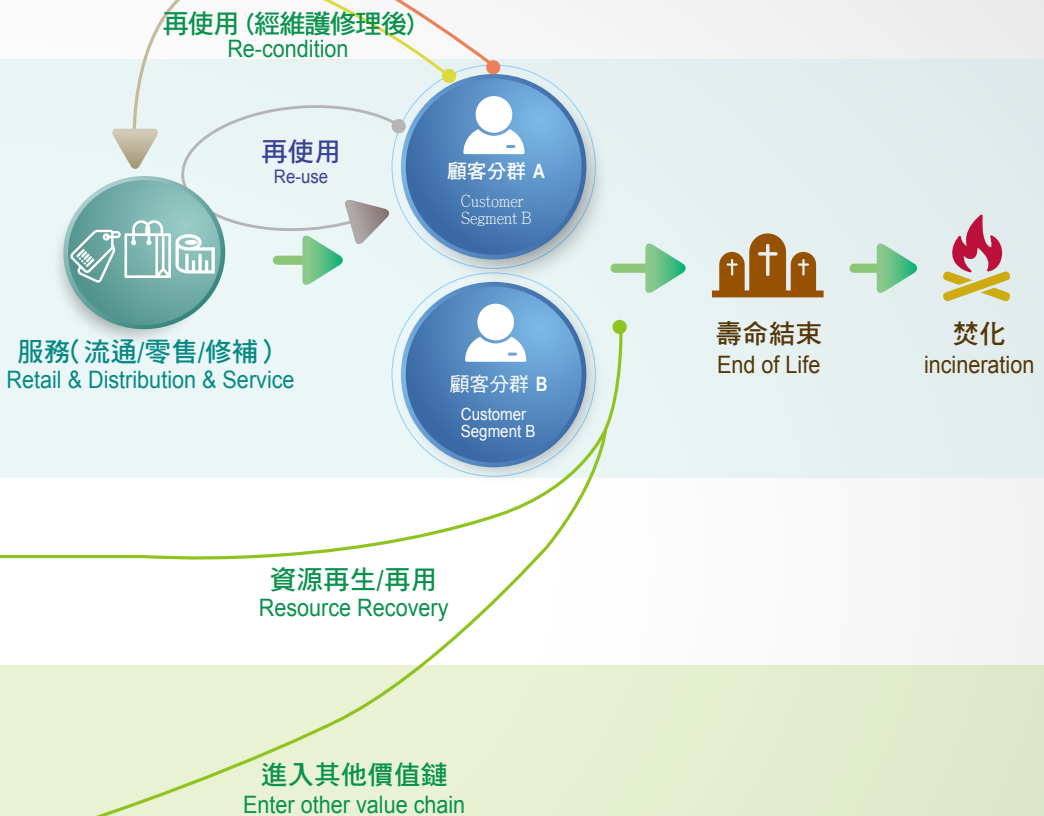

While the world is going green, eco textile labels and certificates issued by internationally authoritative certifying bodies have become not only the quality insurance of products but quite often the minimum criteria to enter major markets like Japan, USA and EU. As a major textile supplier in the world, over 100 textile and apparel companies in Taiwan have received international eco labels and certificates from Oeko-Tex[®], bluesign[®], GOTS and Organic Exchange, to name a few. Testex Swiss, Bureau Veritas, Intertek, TÜV Rheinland and Taiwan Functional Textiles (TFT) are well-known certifiers in Taiwan to provide testing and certification services.

The increasing signs of resource depletion and the impact of wastes to our planet has enabled countries like Holland, Germany, Luxemburg, UK, Belgium, Finland and Japan to declare their commitment towards a circular economy. While the global industry is progressing to reach the new criteria of “high performance, low consumption, toxic free and zero waste”, Taiwan’s textile industry is also facing the same challenge. In order to meet both business and social demands, developing and innovating recycling technology to close the circle on textiles will be a constant goal as well as a social responsibility for Taiwan’s textile industry to strive for.

循環紡織價值鏈

Circular Textile Value Chain

Reference: R2Pi Research report, BMI as one of of the consortium partners to conduct this research **BMI** 方略

Taiwanese textile companies are now learning, sharing and exchanging their concepts, experiences and technologies in green and circular textiles to reengineer, redesign and redefine the textile product chain. The ultimate goal is to achieve a circular supply chain by collecting post consumer textiles and then recycling and regenerating into new materials as input to make textiles. This kind of new business model can optimize resource efficiency, cut waste and prevent earth pollution. Further development in this respect can boost textile R&D energy, drive the transformation of the industry and even create new business potential while moving towards the purpose of environmental protection, waste reduction and resource circulation.

BE THE CHANGE

Take the Challenge

 **SUSTAINABLE DEVELOPMENT GOALS**

Weaving the Sustainable Development Goals into the textile, retail, and apparel industry.

Ecomax Textile Company upholds the spirit for a better life and a more eco friendly environment. Your help and immediate action can protect the earth from being exploited. Using RPET fabrics can be a good way to start as it can be integrated into our daily life. Ecomax was set up in 1968 and we enjoy an excellent reputation through our years of business and work experience. We are the first manufacturer of RPET fabrics in Taiwan. We also devote to other business such as Bamboo Charcoal, R-PVB which we call e-Reco Recycled from waste car windshields and Recycled Nylon made from ghost nets. Ecomax actively develops and promote recycled fabrics and we need your support to make the planet greener and environmentally-friendly.

GAC

High Performance Fabrics

Make You Energetic

UMORFIL®

Umorfil® combines collagen peptide amino acid from recycled fish scale with cellulose fiber for full biodegradability or nylon 6 for sporty applications. Umorfil® fabrics come packed with functionality: naturally deodorizing with antimicrobial features, skin friendly at a medical level for sensitive or irritated skin. Combined with high moisture regain for soft, silky and nurturing hand feel, anti-static and thermoregulating functions, Umorfil® will be a staple material for many high-level collections.

SeaCell™ is made from seaweed harvested ecologically in the fjords of Iceland. Combining cellulose and brown algae, it retains seaweed's minerals and vitamins, including magnesium, calcium, vitamins B and A. Fabrics with SeaCell™ offer great skin protection paired with silky soft touch, ideal for any direct-to-skin application. Made from renewable and biodegradable material with a closed-circuit production process, it is a powerful additive to both fashionable and functional fabric blends.

Reduce Reuse Recycle

With plastic waste polluting the oceans and the nature, it is our responsibility to recycle. GAC recycles polyester from used plastic bottles and nylon from industrial waste. Constantly striving to make production more eco-friendly, GAC also uses dope dyed yarn to save water and energy while reducing CO2 emissions and the use of chemicals during the dyeing process.

YOUR
WATERPROOF
PARTNER

Excellent Waterproof Materials

Conserving our planet - together

Can we protect our beautiful planet from the impact of chemicals? Absolutely!

We just need to change how things are produced, especially the items we wear. The ZDHC Roadmap to Zero Programme is making that happen.

How we do it

We take a holistic, open approach, supporting safer chemical management practices across the entire value chain. By collaborating with ZDHC, organisations can mitigate risk, respond to changing customer demands, cut costs, and preserve valuable resources.

Find out more on our website:

www.roadmaptozero.com

Fabrix PLUS

Fabrix Plus Co.,Ltd is specialize in Woven, Denim, Boardshort, Jacquard and knit fabrics, we have many textile mills to cooperate with, such as Weaving, Dyeing, Foil Printed & Paper Printed mill etc., we have the ability and plentiful resource to develop the novelty, latest quality in fashion to reach the request of our clients.

Fabrix Plus is an experienced fabric manufacturer and exporter for overseas markets. Based on the rigid quality control (QC) and cost effective, we have the confident to provide the best products with highly competitive price and punctual delivery to our clients.

Our principle and goal is to provide good quality and reliability product to our clients from all over the world. We are trying our best to be the supplier with good reputation.

The Best Source For TAIWAN FUNCTIONAL TEXTILES

Certification System

A bridge for global functional textile world

Taiwan Functional Textiles have been equated to premium quality. In general, the grades of functional textile are tested by the equitable laboratory according to specified requirements by the certification committee for functional and technical textiles. Meanwhile, buyers and consumers could be sure of the quality through certification and certified tags.

TFT certification has gone into the 19th year and is moving towards becoming a bridge to global functional textiles for quality assurance.

台灣機能性紡織品已成為國際品牌買主對機能性紡織品品質信賴的保證；根據驗證評議委員會嚴格制定的標準，委由國際認證的實驗室進行檢測，經台灣紡拓會進行等級驗證，針對通過驗證產品頒發證書及發放產品吊牌，為通過機能性紡織產品背書。

目前TFT驗證服務與市場行銷推廣已邁入第19年，未來發展目標將以成為“全球機能性紡織品品質保證的驗證品牌邁進”。

CHROMUCH

Color without Compromise

Chromuch is solution-dyed fiber that reinvents color at the fiber level. Through **ChromShield Technology**, a new standard in sustainable color design becomes a reality. The CHROMUCH fiber uses absolutely no water for sustainable dyeing.

CHROMUCH Recycled Fiber is made of recycled post-consumer plastic bottles.

As the most reliable and most eco-certified synthetic fiber available on the market, CHROMUCH fibers are **rich in color, fade-resistant and earth-friendly**. It's **the best choice in developer-friendly performance textiles**, so designers no longer need to compromise their creative vision or the planet for textile excellence.
